CAST Art ...featuring

WORBLA'S
finest Art

Worbla's Finest Art - the thermoplastic plate & modelling material!

Use hot air, water or steam (min. 90°C) to bring this plastic to the shape you want to. The material is alterable by heat any time, solvent-free manufactured & to process. Conditioned oddments can be blended to 100%, so almost no waste at all incurs. These leftovers can be moulded just like putty or almond paste.

It's hardening very fast, is manually grindable and because of the extra glue on the shiny side, it is very easy to attach the several layers. Hence you can decide to work with more layers right from the beginning or to line thin parts plus e.g. ornaments can be attached easy as pie.

You want to know more about? Check www.Cast4Art.de

Almost everything is possible with this versatile material for creative people: Detailed surfaces & masks, armors and ornaments, replicas of blades or gems plus even costume jewellery, figurines as well as all kind of decoration!

You can varnish **Worbla's Finest Art** e.g. with all kinds of effect spray-paints and acrylics. Therefore, a plastic primer or other base coats can be useful.

To tighten or to cover it, it is very easy to combine it with **KOBRA CAST**[®] Art. From case to case it might be helpful to use extra glue. But usually, the parts stick together very good.
