# WORBLA'S Deco Art

**Worbla's Deco Art** - the unbelievable versatile thermoplastic modelling and moulding pearls with almost no shrinking at all after cooling-down from the **Worbla's Art Series!**

It is activated by heat ( $> 65^{\circ}\text{C}$  /  $>149^{\circ}\text{F}$ ), stiffened after 10 minutes but can be re-activated at any time plus it is very easy to handle:

Put the little pearls into a metal wire and dip them into hot water. As soon as the material becomes lucent it is ready to work with.

Now e.g. you can mould them into a form, roll and mill the mass for getting a plate or model it free-handed. In addition you can simply use it for evening edges plus **Worbla's Finest Art's** surfaces.

You want to know more about? Check  [www.Cast4Art.de](http://www.Cast4Art.de)

Acrylic, spray-paint or permanent markers can be used for coloring its surface. Using acrylic you can even dye the material itself: Just put on some latex gloves, admix the color with the activated pellets and wait until it's hardened plus some more minutes.

Afterwards you can re-activate and use it without any mess because the acrylic stays in the material!

The pics shown here are just giving a tiny impression of all the possibilities using **Worbla's Deco Art**, just as you can combine it easily e.g. for ornaments with our well-known **Worbla's Finest Art**.

Thanks for the Pics to: Lightning Cosplay, Last Minute Man's Kitchen and Arthemis Maskenbild.
