WORBLA'S Meshed Art

Worbla's Meshed Art (WMA) - the new Worbla with the mesh on one side!

Like all the other materials from the **Worbla's Art** series it is entirely non-toxic and solvent-free. **WMA** is also activated by heat (best approx. 80-90° / 175-195°F), becomes mouldable and shapeable by hand and can be re-activated as often as wanted to.

Thanks to the mesh on one side the **Worbla's Meshed Art** is less susceptible as regards tearing out eyelets/ studs and similar things. In addition it is the perfect supplement for forming/ strengthening works with leather or fabrics. However, it is surprisingly possible to create as well great curvatures and organic forms, as needed e.g. in female breastplates!

Do you want to know more? Check www.Cast4Art.de

The glue in the **Worbla's Meshed Art** is stronger than in the **Worbla's Finest Art**; Edges can be blended well together. Furthermore, it is really simple to create a smooth surface and it is also astonishing that it is possible to cast fine structures very well with it.

All kind of colors such as acrylics or spray paints can be used for painting the **WMA**. Though, it is recommended to prime the surface before painting.

Beside this our **Worbla's Meshed Art** is partially made from recycled rice husks, a sustainable resource that through a high-quality processing it is integrated in our material in order to save natural resources. Do you want to know more? As always, you can find photos, info and tutorials on our social media platforms!
