WORBLA'S Pearly Art

Worbla's® Pearly Art (WPA) - Welcome to the bright side of **Worbla's®!**

This is simply another fantastic creative material from **Cast4Art** and just as all the products of the **Worbla's® Art Series** it is solvent-free produced and to proceed with no hazardous substances inside.

The product is also activated by heat (best approx. 80-90 °C / 175-195 °F) and can be re-activated as often as wanted to, just the way you are used to when working with our materials. All leftovers of the **WPA** can be re-used so any waste can almost be totally avoided.

Worbla's® Pearly Art contains strong heat activated glue which means it sticks very well to itself and to other materials when treated properly.

Would you like to know more about it?  blog.Cast4Art.de

By way of example you can combine **Worbla's® Pearly Art** with high density foam for realizing both ornate or plane and smooth surfaces. Because of its light colour it is very suitable for outlining later working steps.

Nevertheless because of the **WPA** is extremely fine it provides excellent modelling features as well, generating very smooth and highly detailed work pieces. In addition even after hardening it stays surprisingly flexible.

All kind of colours such as acrylics or spray paints can be used for painting the **Worbla's® Pearly Art**. Because of it is that smooth sometimes it might be a good idea using a kind of primer like a plastic primer before painting.
